FIRE RING

HEAD SEALING SYSTEM

Honda B-Series

RB26 / RB30

4G63

2JZ

SR20

The Bullet Fire Ring head sealing system has been developed for applications requiring extreme boost levels.

The radial 'leg' on the brass Fire Ring locates in the receiver groove in the top of the sleeve, with the copper gasket fitting around it, effectively acting as a spacer between the block and the cylinder head.

Available for our Dry Deck and Solid billet blocks, the Fire Ring system allows for boost levels approaching 100 psi.

Specify the Fire Ring system when you order your Bullet billet block.
